

Use Uno to program another AtMega 328PU with a bootloader:

Build this circuit on breadboard – add 4 x 330 ohm resistors in-between pins 10, 11, 12, 13 on Uno and the breadboard pins 1, 17, 18, 19.

Do NOT connect to Uno as yet

# **ATmega328** **AVR to Arduino Pin** **Names Translation\***

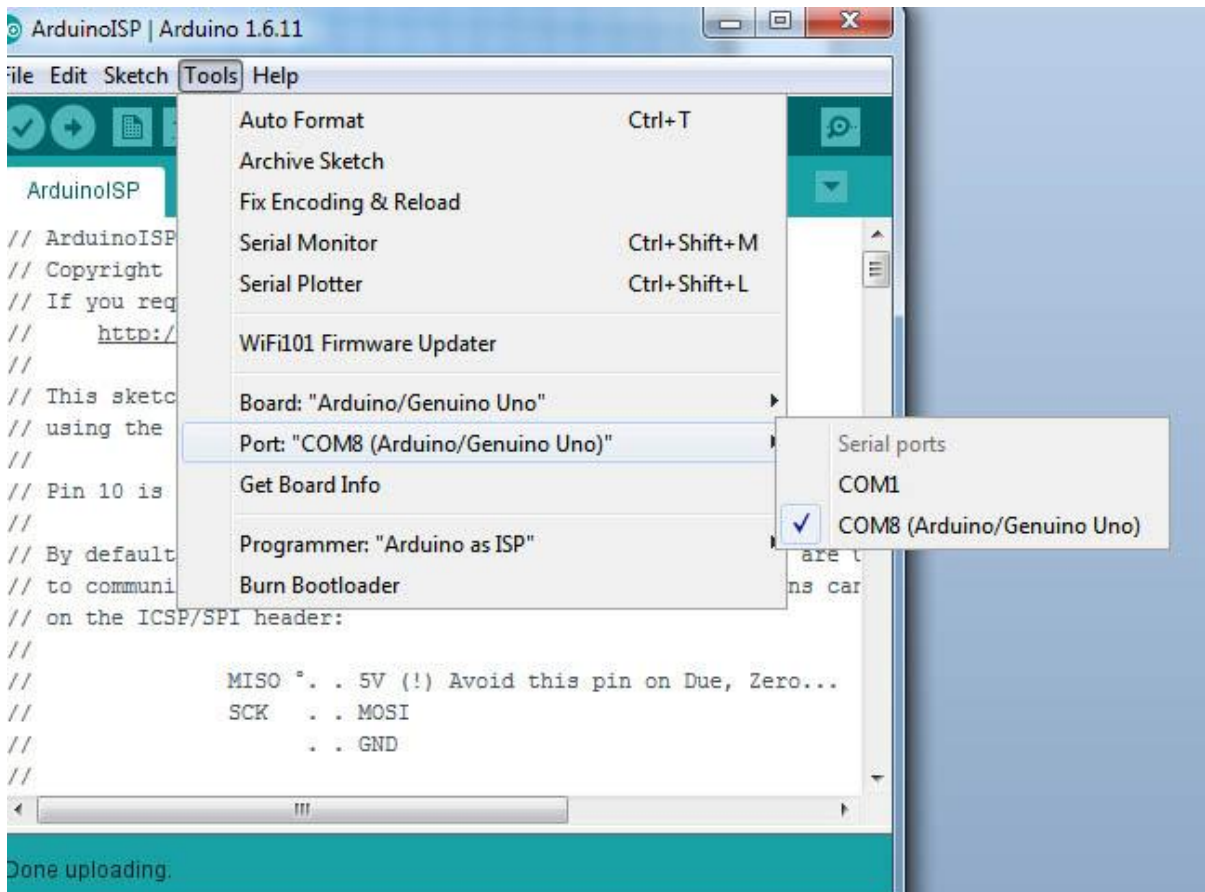

Arduino Name					Arduino Name
RESET	1	RESET (PC6)	ADC5 (PC5)	28	Analog Input 5
RX or Digital Pin 0	2	RX (PD0)	ADC4 (PC4)	27	Analog Input 4
TX or Digital Pin 1	3	TX (PD1)	ADC3 (PC3)	26	Analog Input 3
Digital Pin 2	4	PD2	ADC2 (PC2)	25	Analog Input 2
Digital Pin 3 (PWM)	5	PD3	ADC1 (PC1)	24	Analog Input 1
Digital Pin 4	6	PD4	ADC0 (PC0)	23	Analog Input 0
VCC (1.8V to 5V)	7	VCC	GND	22	GND
GND	8	GND	AREF	21	Analog Reference
Crystal	9	PB6 (Xtal1)	AVCC	20	VCC
Crystal	10	PB7 (Xtal2)	PB5 (SCK)	19	Digital Pin 13
Digital Pin 5 (PWM)	11	PD5	PB4 (MISO)	18	Digital Pin 12
Digital Pin 6 (PWM)	12	PD6	PB3 (MOSI)	17	Digital Pin 11 (PWM)
Digital Pin 7	13	PD7	PB2	16	Digital Pin 10 (PWM)
Digital Pin 8	14	PB0	PB1	15	Digital Pin 9 (PWM)

U1  
ATMEGA328

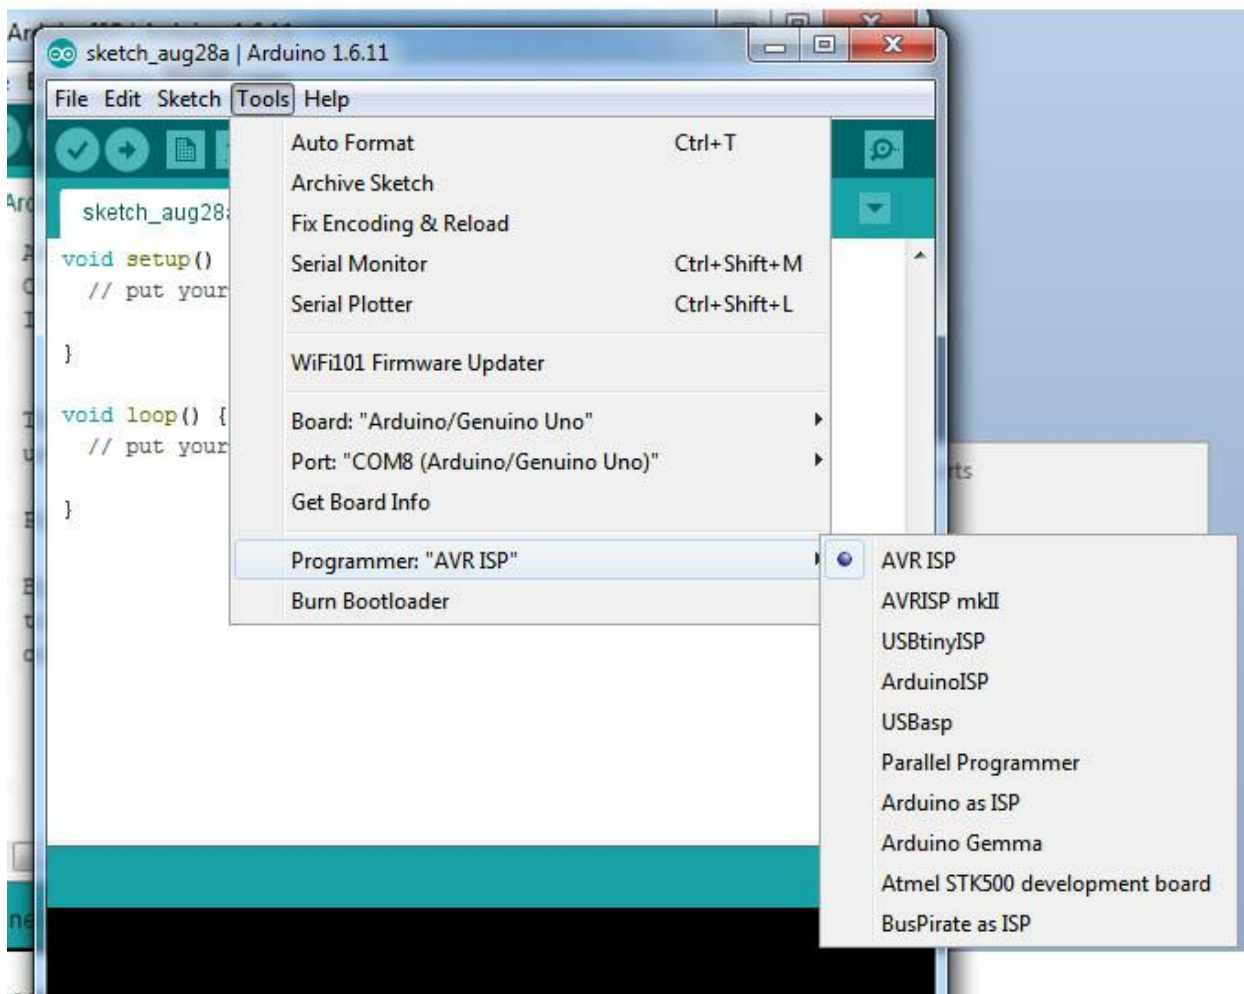

Connect Uno with an usb cable and start Arduino ide

Check that correct com port is chosen (if another Uno is plugged in it will have a different com number)

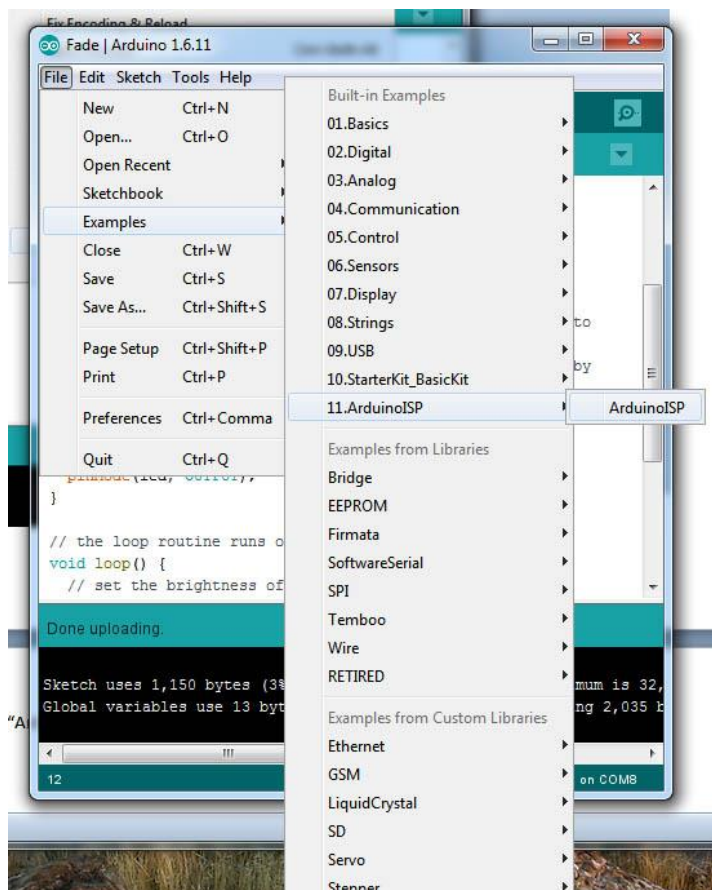

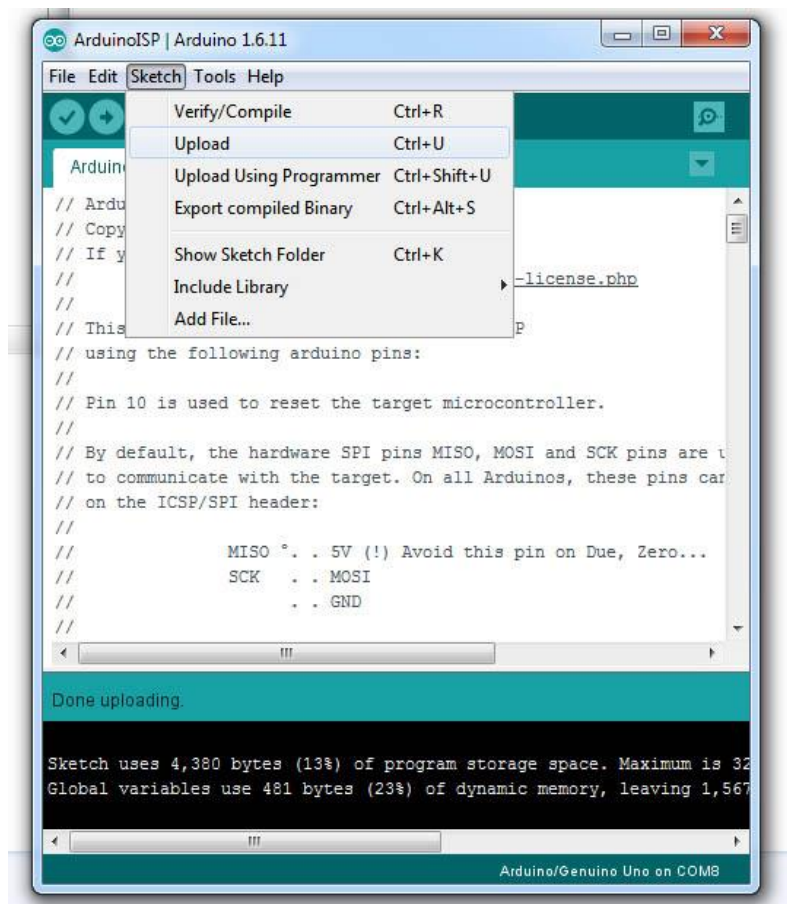

Check that under Programmer is set to the PC based Arduino IDE

Now select sketch "Arduino as ISP" under Examples

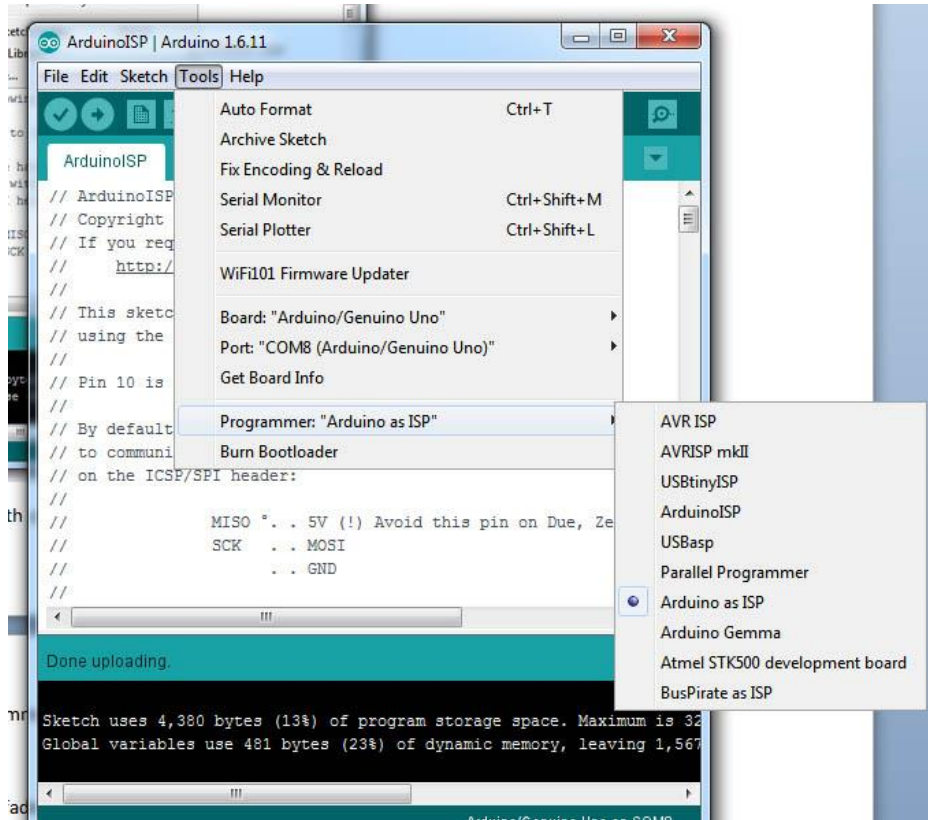

Make sure AVR ISP is still the programmer and then upload the sketch "Arduino as ISP" to the Uno

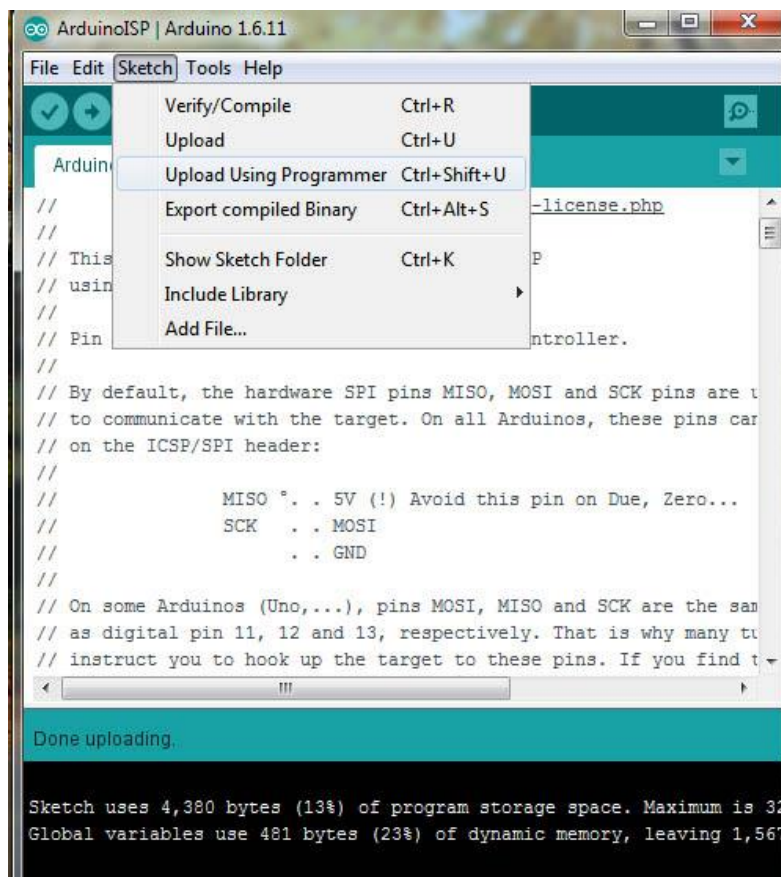

Then make the earth connection, then the +5v, then connect the 4 wires to pins 10, 11, 12, 13 of the uno

Change the programmer now to Arduino as ISSP

Select the sketch “fade” – note that it uses PWM 9 i.e pin 15 on the AtMega 328PU, and upload it “Using the Programmer”

Connect an LED via 470 ohm resistor between pin 15 on the AtMega 328PU and ground – it will fade up and down

Note that if the blink sketch is uploaded it uses pin P13 which is connected to the Uno pin 13 which can cause a conflict
